

## Miniature Slide Switch 413-0P

A miniaturized on/off switch for vertically operation (piano style). Well dimensioned actuators and good visible identification allow to set the switch easily. By positioning the switch in the outline areas of the pcb, and even by the use of slot insertion, the switch can be actuated from the front rear end through cut outs in the housing. It is available in two to twelve single switch versions in DIL housing, on special orders the switch can be taped to be protected against contamination.

<b>Specifications</b>	2 to 12 pole DIP switch
<b>Dimensions</b>	32 x 9.7 x 11.3 mm
<b>Pining</b>	DIL spacing
