

Subminiature Slide Switch 430-08

A two pole slide switch for the universal use in today's electronic's. The switch fulfills by the use of gold plated contact system the highest demands in function, performance and is best for switching even smallest currents starting at 1 mA. The design, the plastic material and the used pin configuration allow, even by the use of a top side actuator, automatic pick and place and reflow soldering on smallest board space required.

Specifications:	Mini change over slide switch
Dimensions:	9 x 5,5 x 3,3 mm
Pining:	DIL spacing or SMD
